

Scalable technology solutions for

Truck and Body Builder/ Fabricators

Save time, streamline operations and increase profits.

Boost productivity with Epicor Software's *Make-to-Order*, *Engineer-to-Order* and *Configure-to-Order* manufacturing capabilities. Specific functionality to save time and money include:

DRIVE REVENUE & INCREASE PROFITABILITY

Manage services operations and parts sales with a full suite of tools to improve your bottom line for efficiency. Put your repair parts catalogue on an integrated e-commerce site

Sales Configurator: Eliminate errors that originate in incompatible options – give sales people the ability to leverage engineering rules while pricing and configuring the product.

Engage Dealers and customers with a portal for parts, warranty and online ordering.

Understand your costs and profitability at time of quote and order through to delivery in real time.

STREAMLINE & OPTIMIZE OPERATIONS

Configurator driven engineered options. For quoting and orders –allowing you to launch the Job immediately.

CAD Integration: Manage reusable components and assemblies. Push them directly into your production system, quickly and efficiently, for material planning and work order execution.

Provide Dealers with Option based web quoting tool that presents a 3D Model based on your choices

Job scheduling: Schedule the shop and the individual operations for each order. See the impact before you take an order. See the impact and bottleneck based on staff available and work to be completed.

TECHNOLOGY TO KEEP YOU AHEAD

CPQ Product Configurator for rendering a graphical representation of your product configuration choices.

CAD Interface for importing the BOM directly from CAD.

As built configuration: Always see what the specific VIN number record of materials and components that were included in the build.
